

SEG3525 Assignment 1 Report

Student Information

- Name: Aditya Baindur
- Student number: 300382718
- Course: SEG3525
- Report title: Portfolio Homepage Visual Communication Report

JavaScript Experience and Learning Resources

I have been building with JavaScript and TypeScript for several years, and I generally use TypeScript for most serious projects. For this assignment, I used React with Vite and Bootstrap as the main framework foundation, then layered custom styling to reflect a strong visual direction.

To refresh and align with course expectations, I reviewed:

1. W3Schools references for HTML, CSS, JavaScript, and Bootstrap 5.
2. Net Ninja Bootstrap 5 tutorial materials.
3. Official React and Vite documentation for implementation details.

Portfolio Inspiration Links (Positive and Negative)

1. <https://millerding.com>
 - Positive inspiration. I like the clarity and discipline of the layout. Content is easy to scan, hierarchy is obvious, and the visual language feels intentional rather than decorative.
2. <https://markchen.dev>
 - Negative inspiration. The site is technically impressive, but for my taste it has too many simultaneous interactions. It feels busy and can pull attention away from the core message.
3. <https://adityabaindur.com>
 - Mixed inspiration. I like the clean aesthetic and minimal structure, but I wanted this assignment site to provide more descriptive context about process and project direction.

Hosted Interface Link

- Hosted URL: d1.byaditya.com

Bootstrap/Source Repository Link

- Repository URL: https://github.com/ABUO023/SEG_3525-Devoir_1

Run Instructions (Local)

```
cd web  
npm i  
npm run dev
```

This starts the Vite dev server for the portfolio homepage.

Visual Communication Design Choices

a) Colors

I used a light monochrome palette: white backgrounds, black text, and gray separators. I intentionally avoided bright accent colors so the page feels clean and focused. Most of the emphasis comes from black borders, section dividers, and typographic contrast.

b) Typography

I used Playfair Display for major headings and Source Serif 4 for body text. This gave the page a more editorial look while keeping long paragraphs readable. I used JetBrains Mono for smaller labels/buttons to separate utility text from content text.

c) Layout (Scale, Hierarchy, Balance, Contrast)

The layout is built around a strong vertical rhythm and clear section blocks:

- **Scale:** The hero title is intentionally oversized so the page purpose is obvious immediately.
- **Visual hierarchy:** Section titles, body text, and small labels each have distinct size, weight, and spacing patterns.
- **Balance:** A two-column structure in key sections balances dense explanatory text with open negative space.
- **Contrast:** Contrast is created through black-on-white typography, heavy section lines, and bordered cards.

Overall, I wanted the page to feel direct and readable first, while still looking like a personal portfolio and not a generic template.
